Name: Paul Gerald D. Pare

Section: 10-Hawking

Activity 4

Guide Questions

1. Now that you have learned that proteins is made using the information from DNA and how mmutations may cause changes in the structure and function of a protein. What do you think are the significant contributions of this knowledge to human soci-ety?

For every discovery in science that we get, there is always a use case, either for good or bad purposes. Obviously, this discovery is a big deal in medicine as it allows further research to treat certain diseases like tuberculosis that previously does not have a treatment. Modern medicine is without a doubt, not going to exist without the discovery of DNA. With this, it became clearer and we can understand on what to do

or use against a disease.
